

PROPOSAL for CLICKNX

WhatsApp-Based Service Enquiry, Lead Management & Appointment Booking Automation

1. Project Overview

We propose to develop a WhatsApp-based service enquiry and customer engagement automation system for CLICKNX, enabling customers to explore services, compare available packages, submit their requirements, book appointments, and receive quotations through WhatsApp.

The solution will provide CLICKNX with a structured and automated customer journey, while an accompanying Admin App will allow the CLICKNX team to monitor conversations, leads, enquiries, bookings, and customer information from a centralized platform.

The system will be designed around CLICKNX's existing service offerings, including Google Ads Management, Meta Ads, Conversion Rate Optimization, Analytics & Tracking Setup, Social Media Marketing, TikTok Ads, LinkedIn Ads, Programmatic Advertising, and Landing Page Design Services.

2. Proposed Customer Journey

Step 1 – Customer Initiates WhatsApp Chat

The customer starts a conversation with the CLICKNX WhatsApp Business number by sending:

"Hi"

The automated WhatsApp bot will immediately respond with a welcome message and display the available services.

Step 2 – Service Selection

The customer will be presented with the available CLICKNX services:

- Google Ads Management
- Meta Ads (Facebook & Instagram)

- Conversion Rate Optimization
- Analytics & Tracking Setup
- Social Media Marketing
- TikTok Ads
- LinkedIn Ads
- Programmatic Advertising
- Landing Page Design

The customer can select the service they are interested in directly within the WhatsApp conversation.

Step 3 – Package Selection

Once a service is selected, the system will display the available packages for that service.

For example:

Meta Ads

- Basic Package – AED XXX
- Standard Package – AED XXX
- Premium Package – AED XXX

Each package can include:

- Package name
- Price
- Services/features included
- Package description
- Key deliverables

The customer can select a package based on their requirement.

Step 4 – Package Enquiry

After selecting a package, the customer can choose to:

- Get more information
- Enquire about the package
- Submit their requirements
- Proceed with booking

The bot will guide the customer through the appropriate next step, based on the selected service/package, the system will automatically generate and share a form link within the WhatsApp conversation.

The form can be configured according to the information required by CLICKNX.

Possible information fields may include:

- Customer Name
- Company Name
- Email Address
- Phone Number
- Website
- Business/Industry
- Service Required
- Selected Package
- Current Advertising Platforms
- Monthly Advertising Budget
- Business Requirements
- Additional Comments

The form structure can be customized based on the service selected along with that the customer will be provided with an option to book an appointment.

The customer can:

- View available dates
- View available time slots
- Select a preferred date
- Select a preferred time
- Confirm the appointment

Once the appointment is confirmed, the booking details will be recorded automatically.

Step 7 – Automated Quotation Generation

Once the customer completes the required form and selects the relevant service/package, the system will automatically generate a quotation based on the configured package and pricing structure.

The quotation can contain:

- Customer details
- Selected service
- Selected package
- Package details
- Pricing
- Applicable terms & conditions
- Company details

The generated quotation can then be shared with the customer through the configured communication channel.

3. WhatsApp Conversation Management

The WhatsApp automation will maintain the complete customer conversation journey.

The system will track the customer's progress, including:

Customer → Service Selected → Package Selected → Enquiry → Form Submitted → Appointment Booked → Quotation Generated

This will allow the CLICKNX team to understand exactly where each customer is within the enquiry process.

4. Overall System Flow

Customer Side

WhatsApp → "Hi" → Services → Select Service → Packages → Select Package → Enquiry → Requirement Form with appointment booking → Submit Details → Quotation Generation

Admin Side

Admin can view the WhatsApp like inbox which has Customer Conversation

Can view the Form Responses, Booking Details and Quotation

5. Key Benefits

The proposed system will help CLICKNX:

- Automate initial customer enquiries
 - Present services and packages through WhatsApp
 - Reduce manual enquiry handling
 - Collect structured customer information
 - Capture and manage leads centrally
 - Automate appointment scheduling
 - Track customer journey and conversation stages
 - Generate quotations automatically
 - Provide the team with a centralized WhatsApp inbox
 - Improve response time and customer experience
 - Reduce lead drop-offs during the enquiry process
 - Provide better visibility into enquiries, bookings, and conversions
-

6. Proposed Solution Components

The solution will consist of:

1. WhatsApp Automation

Customer-facing WhatsApp chatbot and automated conversation flow.

2. Service & Package Module

Management and display of CLICKNX services and packages.

3. Dynamic Requirement Forms

Forms configured to collect service-specific customer information.

4. Appointment Booking Module

Date and time selection with booking management in the requirement form.

5. Automated Quotation Module

Quotation generation based on selected service/package and customer information.

6. Admin app

Centralized management of conversations, leads, forms, bookings, services, packages, and quotations.

7. WhatsApp like Inbox

Centralized view of customer and bot conversations.

7. Conclusion

The proposed WhatsApp-based automation solution will create a complete digital customer journey for CLICKNX — from the initial "Hi" message to service discovery, package selection, requirement collection, appointment booking, and quotation generation.

Alongside the customer-facing WhatsApp experience, the Admin app will provide the CLICKNX team with complete visibility into customer conversations, lead information, booking details, and enquiry progress.

The solution will enable CLICKNX to streamline its customer acquisition process, improve operational efficiency, and create a more structured and scalable enquiry-to-conversion workflow.
